Summarizing data

• Aggregate functions return a single value

Aggregate functions

```
AVG(), SUM(), MIN(), MAX(), COUNT()
```

```
SELECT AVG(budget)
FROM films;
```

```
SELECT SUM(budget)
FROM films;
```

```
|avg
|----|
|39902826.2684...|
```

```
|sum
|-----|
|181079025606|
```

Aggregate functions

```
SELECT MIN(budget)
FROM films;
```

```
SELECT MAX(budget)
FROM films;
```

```
|min|
|---|
|218|
```

```
|max
|----|
|12215500000|
```

Non-numerical data

Numerical fields only

- AVG()
- SUM()

Various data types

- COUNT()
- MIN()
- MAX()

Non-numerical data

Minimum <-> Maximum

Lowest <-> Highest

$$A \leftarrow Z$$

1715 <-> 2022

0 <-> 100

Non-numerical data

```
SELECT MIN(country)
FROM films;
```

```
SELECT MAX(country)
FROM films;
```

```
|max
|----|
|West Germany|
```

Aliasing when summarizing

```
SELECT MIN(country)
FROM films;
```

```
SELECT MIN(country) AS min_country
FROM films;
```

```
|min_country|
|----|
|Afghanistan|
```

Let's practice!

INTERMEDIATE SQL

Summarizing subsets

INTERMEDIATE SQL

Jasmin Ludolf

Data Science Content Developer, DataCamp

Using WHERE with aggregate functions

```
SELECT AVG(budget) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

Using WHERE with aggregate functions

```
SELECT SUM(budget) AS sum_budget
FROM films
WHERE release_year = 2010;
```

```
SELECT MIN(budget) AS min_budget
FROM films
WHERE release_year = 2010;
```

```
|sum_budget|
|----|
|8942365000|
```

```
|min_budget|
|----|
|65000 |
```

Using WHERE with aggregate functions

```
SELECT MAX(budget) AS max_budget
FROM films
WHERE release_year = 2010;
```

```
SELECT COUNT(budget) AS count_budget
FROM films
WHERE release_year = 2010;
```

```
|max_budget|
|----|
|600000000|
```

```
|count_budget|
|-----|
|194 |
```

ROUND()

Round a number to a specified decimal

```
SELECT AVG(budget) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

```
ROUND(number_to_round, decimal_places)
```

```
SELECT ROUND(AVG(budget), 2) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

```
|avg_budget |
|----|
|41072235.18|
```

ROUND() to a whole number

```
SELECT ROUND(AVG(budget)) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

```
SELECT ROUND(AVG(budget), 0) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

```
|avg_budget|
|----|
|41072235 |
```

```
|avg_budget|
|----|
|41072235 |
```

ROUND() using a negative parameter

```
SELECT ROUND(AVG(budget), -5) AS avg_budget
FROM films
WHERE release_year >= 2010;
```

```
|avg_budget|
|-----|
|41100000 |
```

Numerical fields only

Let's practice!

INTERMEDIATE SQL

Aliasing and arithmetic

INTERMEDIATE SQL

Jasmin Ludolf

Data Science Content Developer, DataCamp

Arithmetic

```
+ , - , * , and /
```

```
SELECT (4 + 3);
```

SELECT (4 * 3);

|7|

|12|

```
SELECT (4 - 3);
```

SELECT (4 / 3);

|1|

|1|

Arithmetic

```
SELECT (4 / 3);
```

SELECT (4.0 / 3.0);

|1|

|1.333...|

Aggregate functions vs. arithmetic

Aggregate functions

title	ticket_price	fees	tax
The Host	5	1	0.5
The Mask	5	1	0.5
Titanic	6	2	0.6

Arithmetic

title	ticket_price	fees	tax
The Host	5	1	0.5
The Mask	5	1	0.5
Titanic	6	2	0.6

Aliasing with arithmetic

```
SELECT (gross - budget)
FROM films;
```

```
SELECT (gross - budget) AS profit
FROM films;
```

```
|?column?|
|-----|
|null |
|2900000 |
|null |
```

```
|profit |
|-----|
|null |
|2900000 |
|null |
```

Aliasing with functions

```
SELECT MAX(budget), MAX(duration)
FROM films;
```

```
|max |max |
|----|---|
|12215500000|334|
```

```
|max_budget |max_duration|
|-----|
|12215500000|334
```

Order of execution

- Step 1: FROM
- Step 2: WHERE
- Step 3: SELECT (aliases are defined here)
- Step 4: LIMIT

 Aliases defined in the SELECT clause cannot be used in the WHERE clause due to order of execution

```
SELECT budget AS max_budget
FROM films
WHERE max_budget IS NOT NULL;
```

```
column "max_budget" does not exist
LINE 5: WHERE max_budget IS NOT NULL;
^
```

Let's practice!
