

Data cleaning and transformation

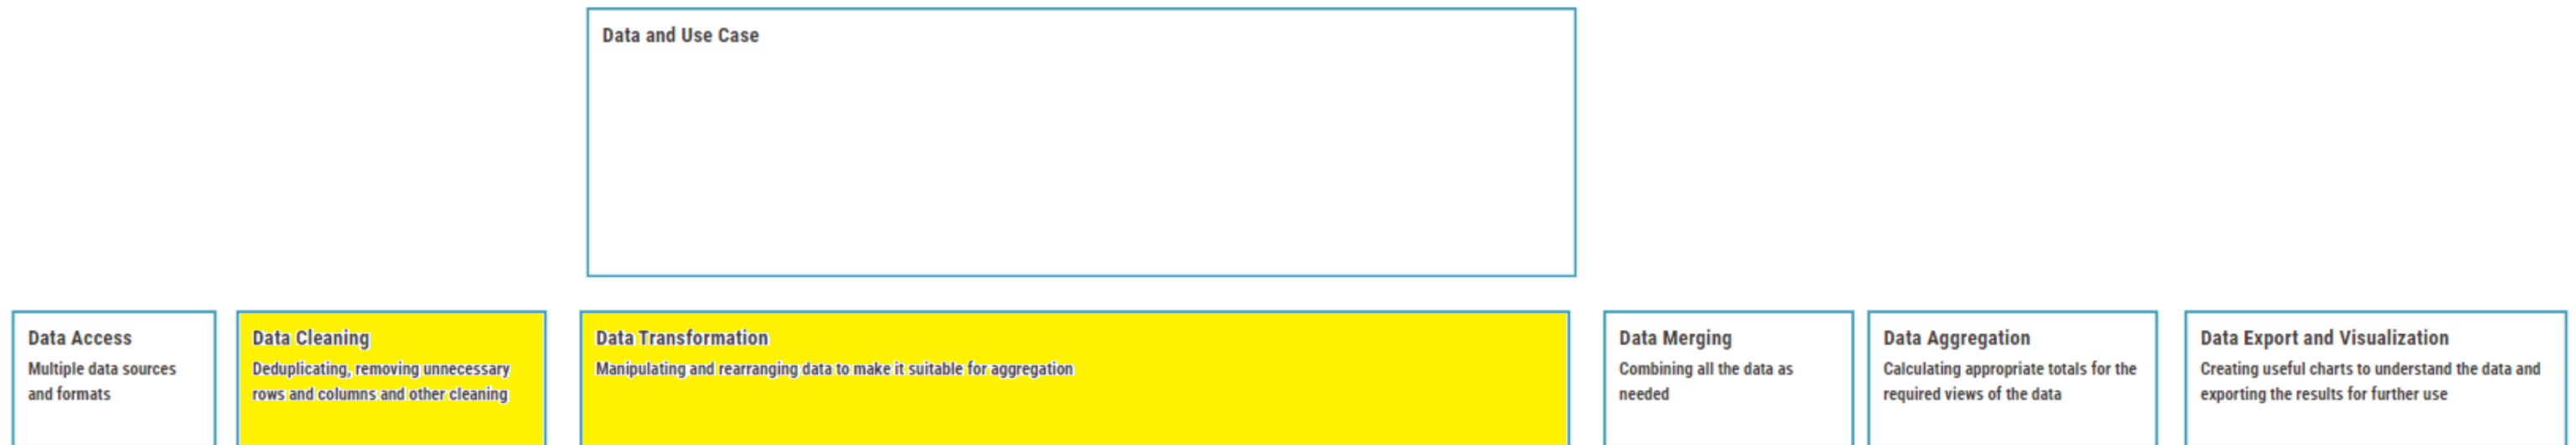

CASE STUDY: FINANCIAL ANALYSIS IN KNIME

Andrew Logan
Data Scientist, 4&8 Ltd

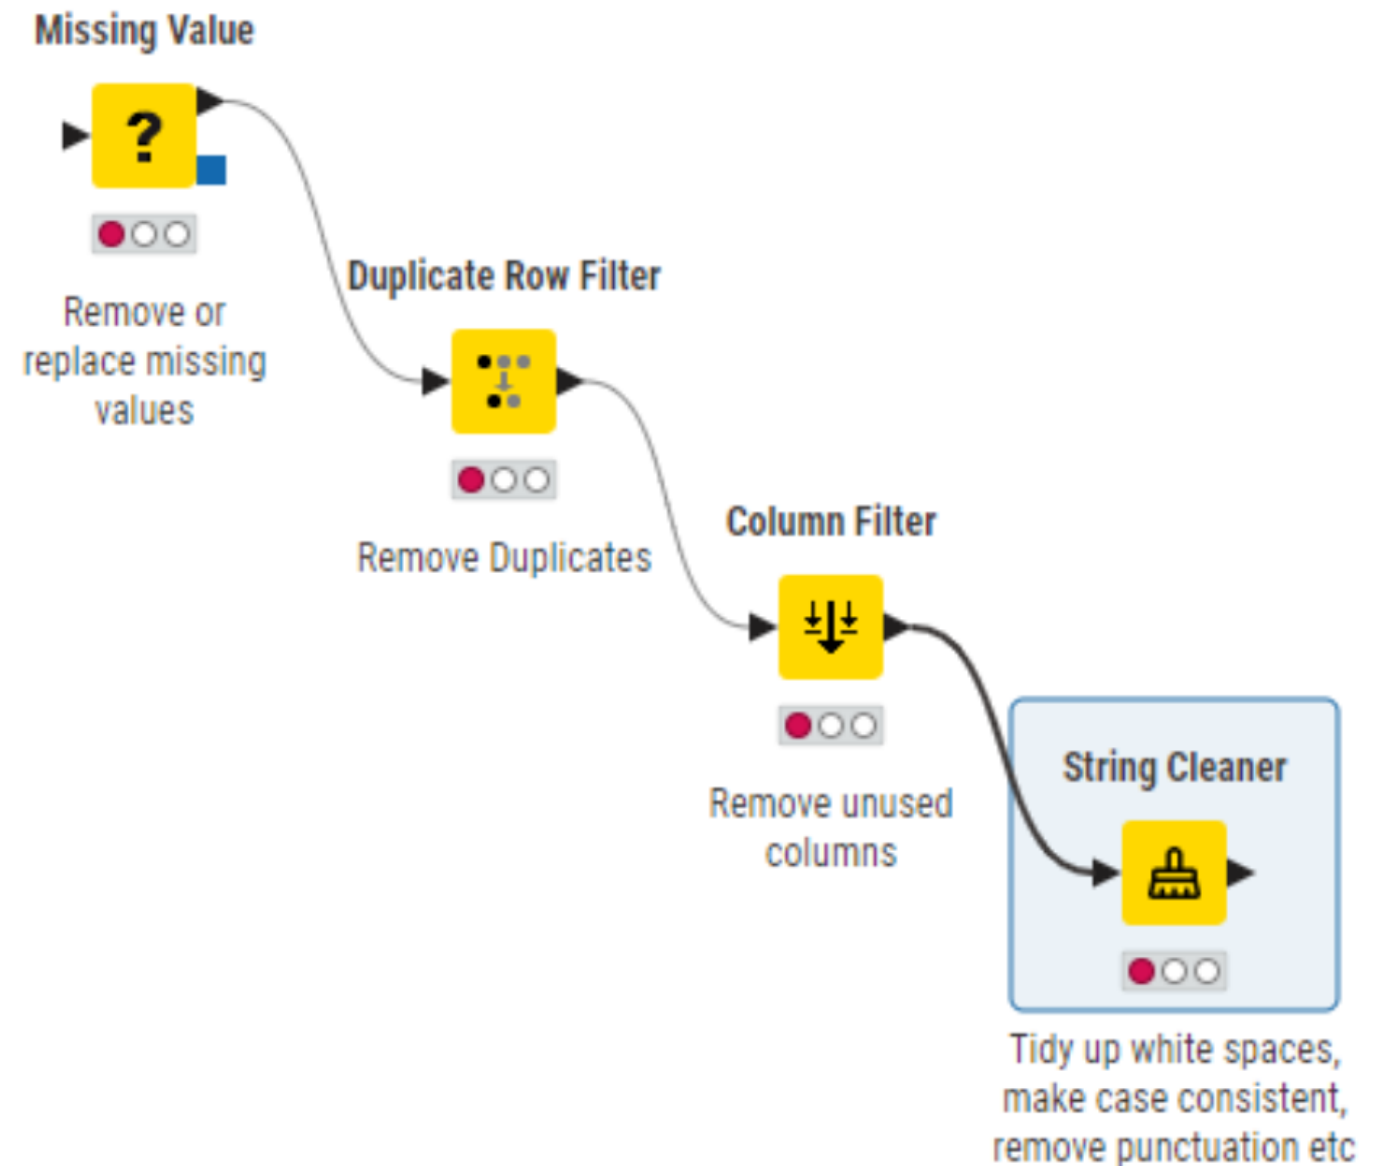

Sticking to the plan

- Clean, useful, and consistent data
- Cleaning: missing values, deduplication, removing unnecessary rows and columns, etc
- Transformation: string manipulation, numerical calculations, renaming columns etc

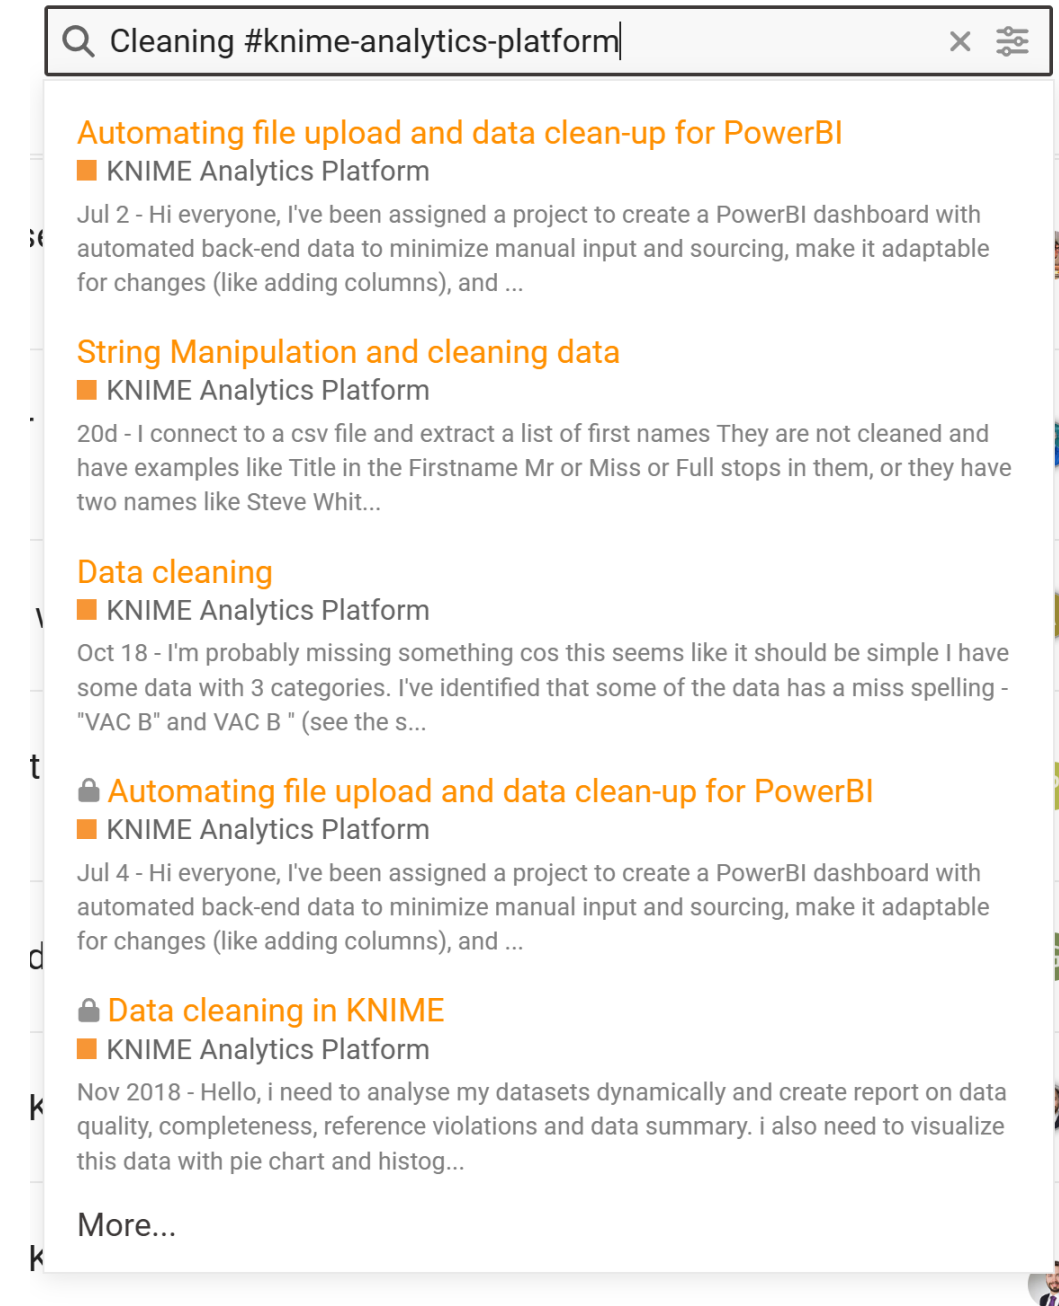

Sparkling clean

- Most common nodes: Missing Value, Duplicate Row Filter, Column Filter, String Cleaner
- Annotate!

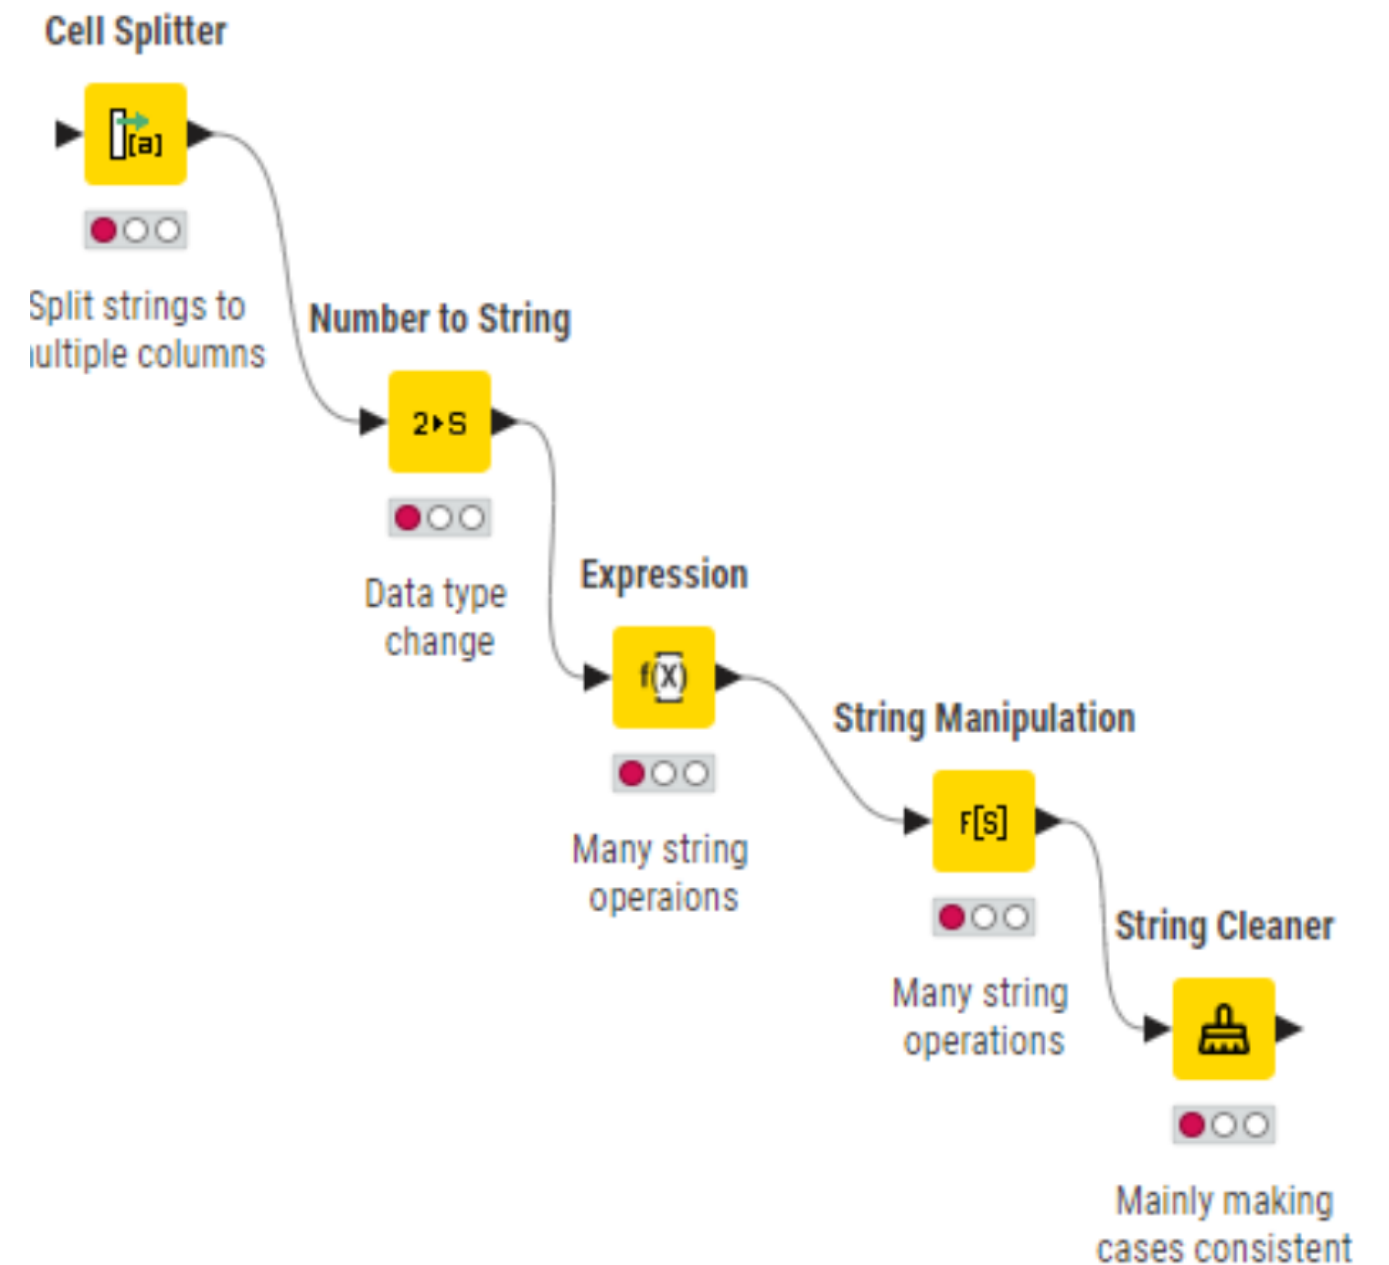

Sparkling clean

- Most common nodes: Missing Value, Duplicate Row Filter, Column Filter, String Cleaner
- Annotate!
- Many others: use the KNIME forum - <https://forum.knime.com/> or search engine for special cases

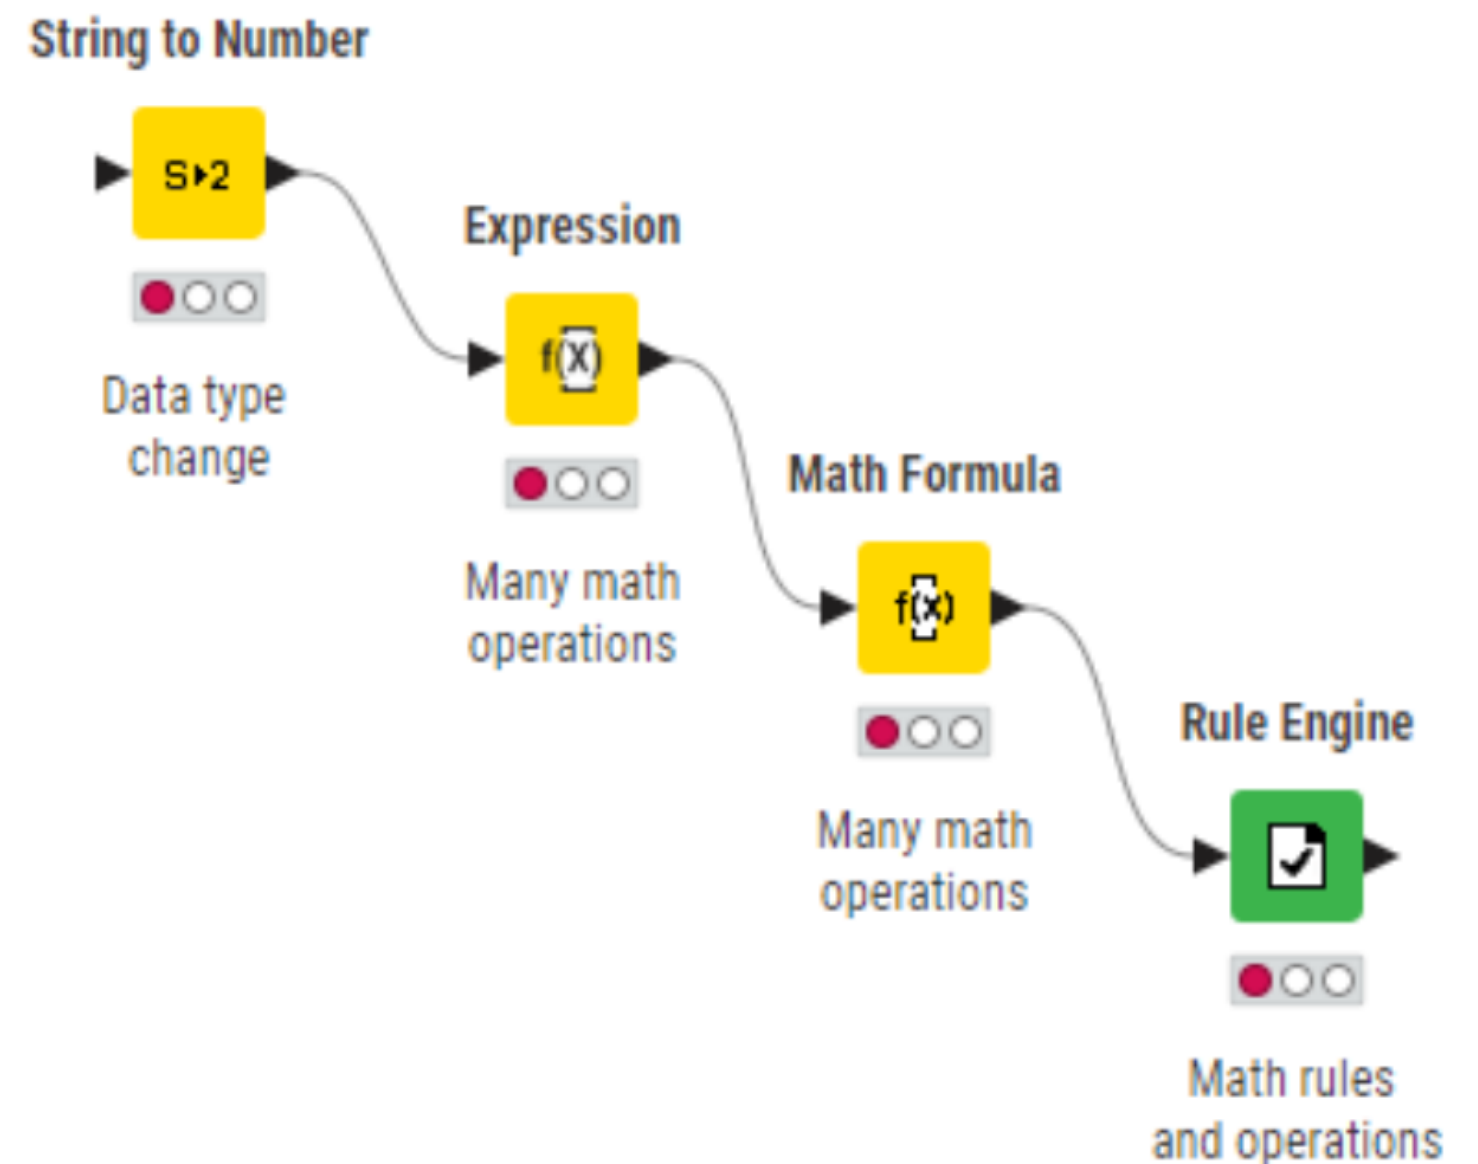

Making useful changes

- Manipulating data to make it useful
- String manipulation

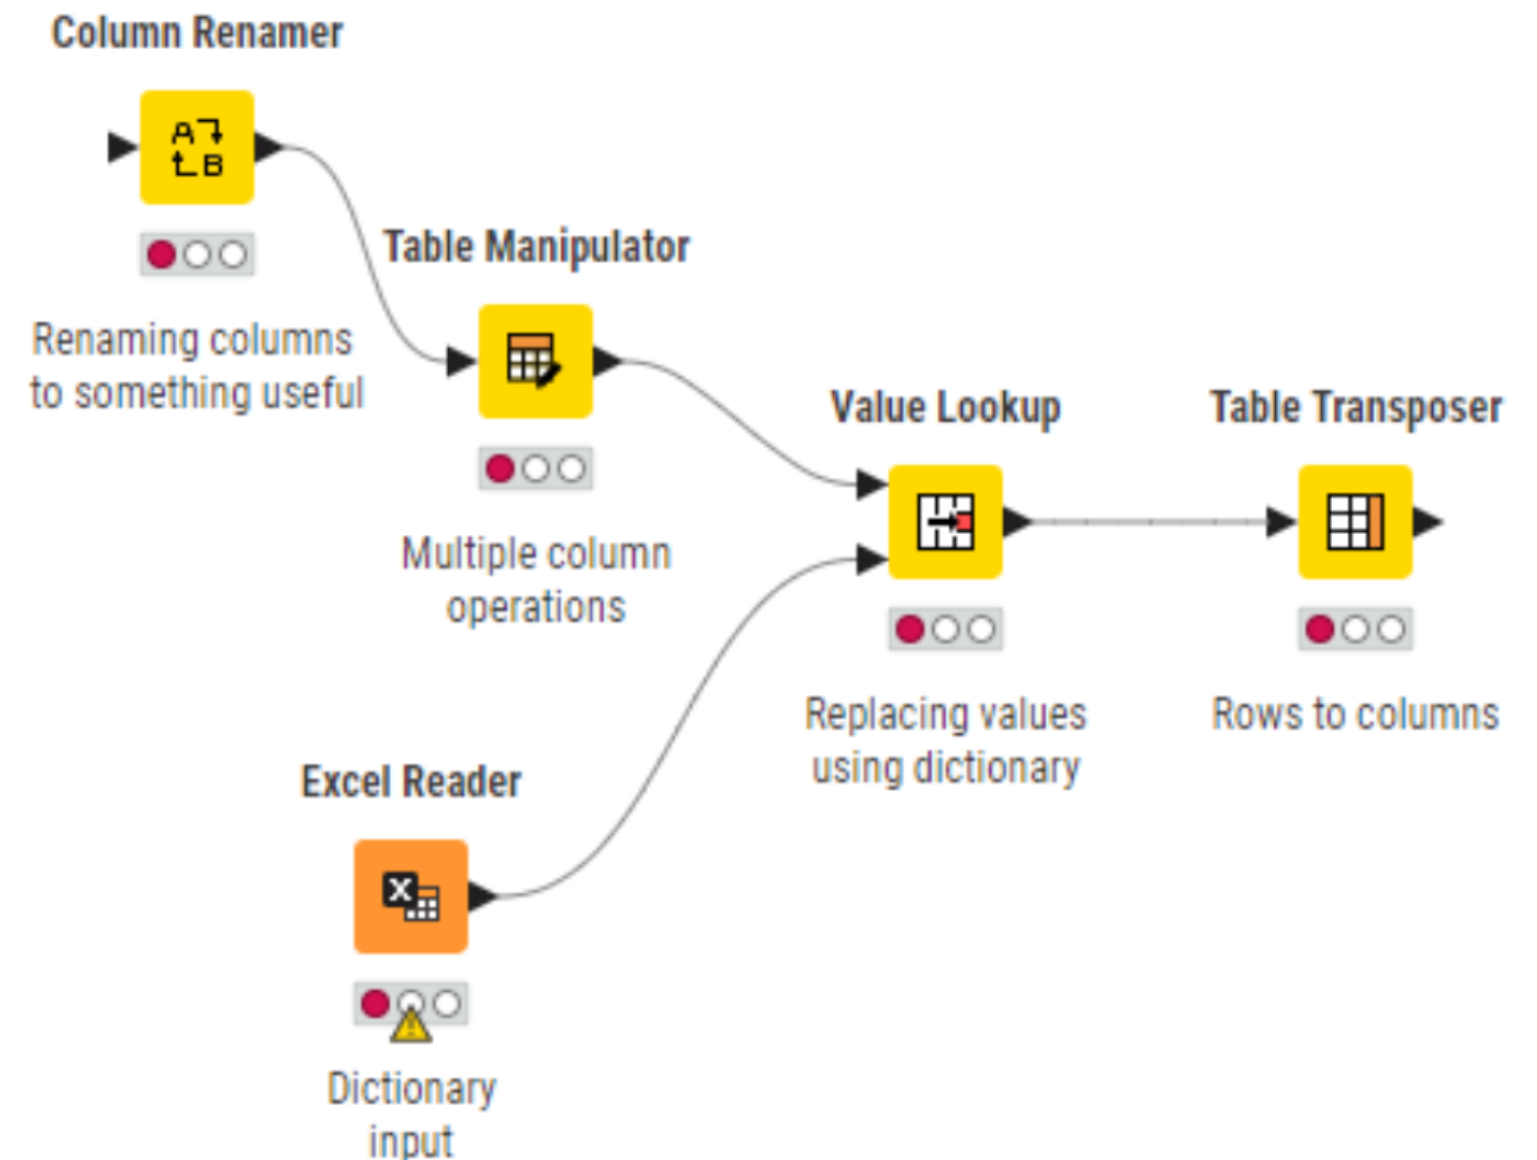

Making useful changes

- Manipulating data to make it useful
- String manipulation
- Numerical calculation

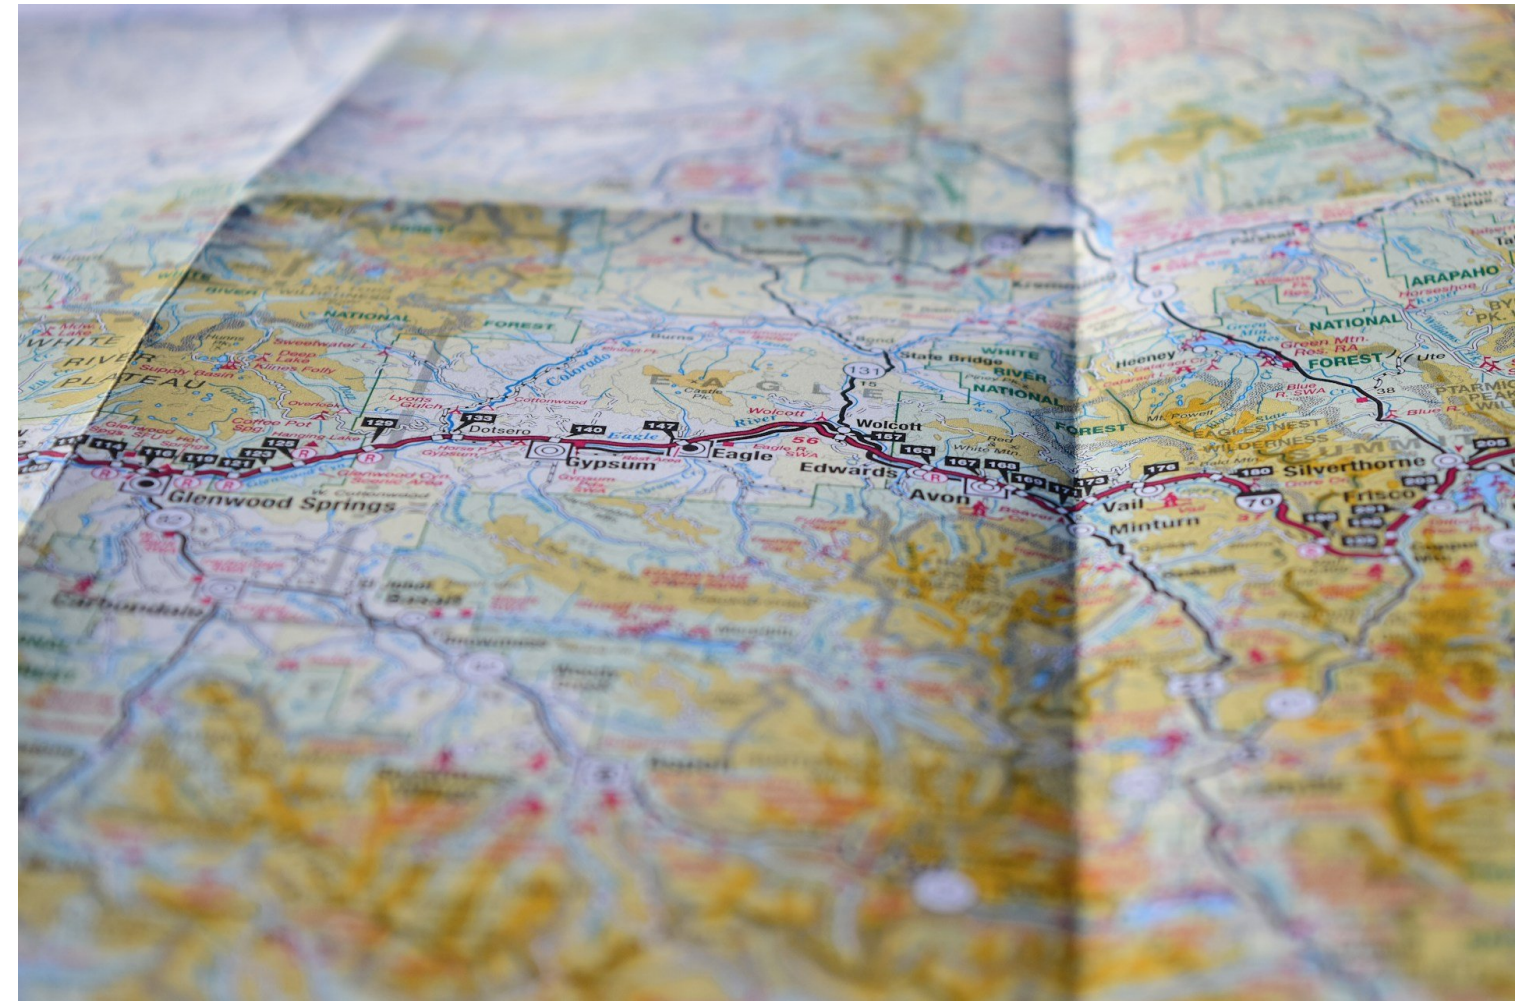

Making useful changes

- Manipulating data to make it useful
- String manipulation
- Numerical calculation
- Some other transformation nodes
- Annotations!

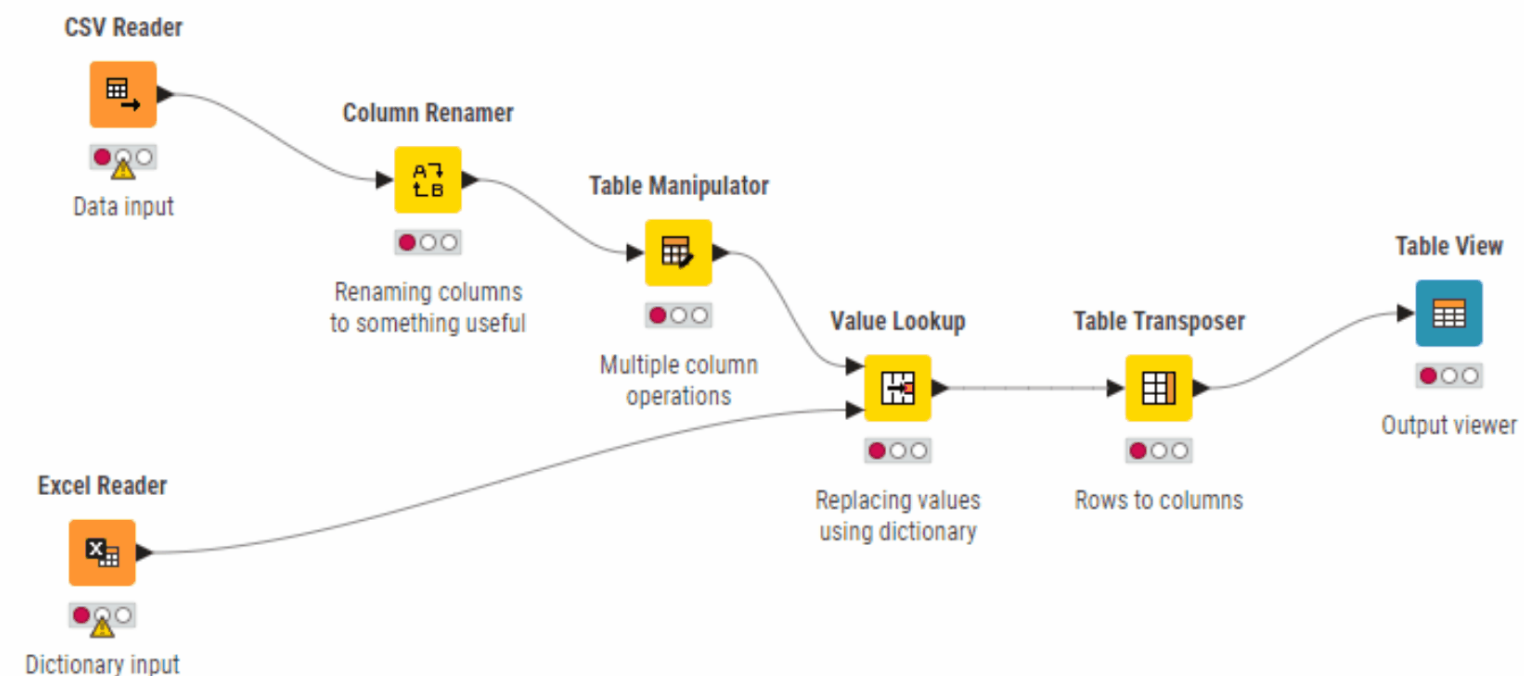

Easier to understand and re-use

- Metanodes - the towns on the map.

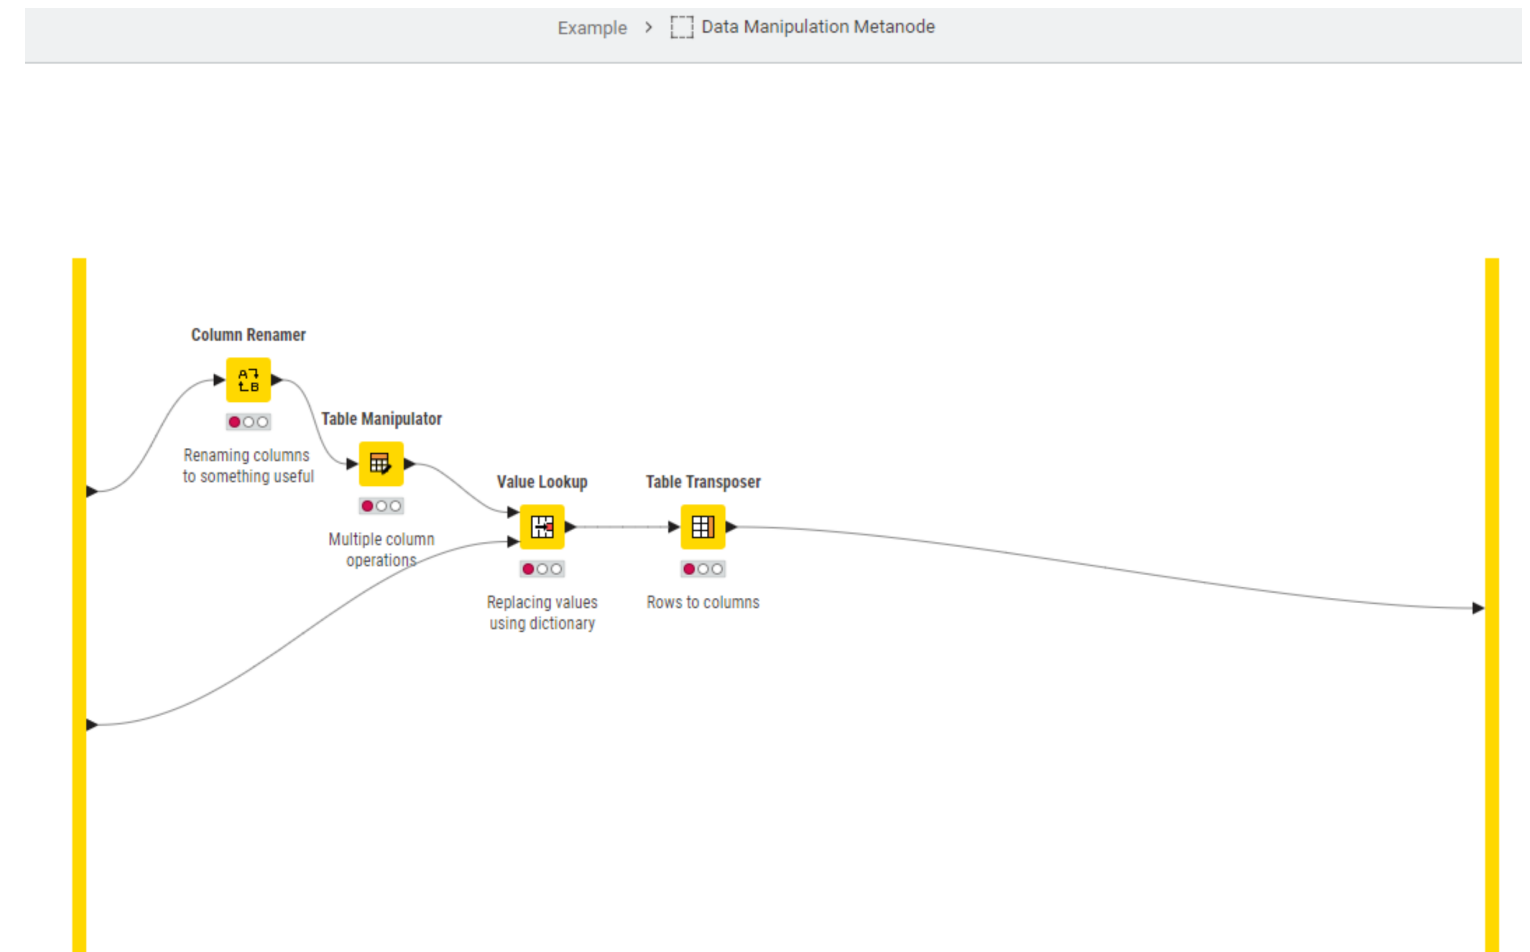

Easier to understand and re-use

- Metanodes - the towns on the map.
- Many nodes into one

Easier to understand and re-use

- Metanodes - the towns on the map.
- Many nodes into one
- Time saver
- Easy to understand
- Easy to annotate

Let's practice!
