Star schema

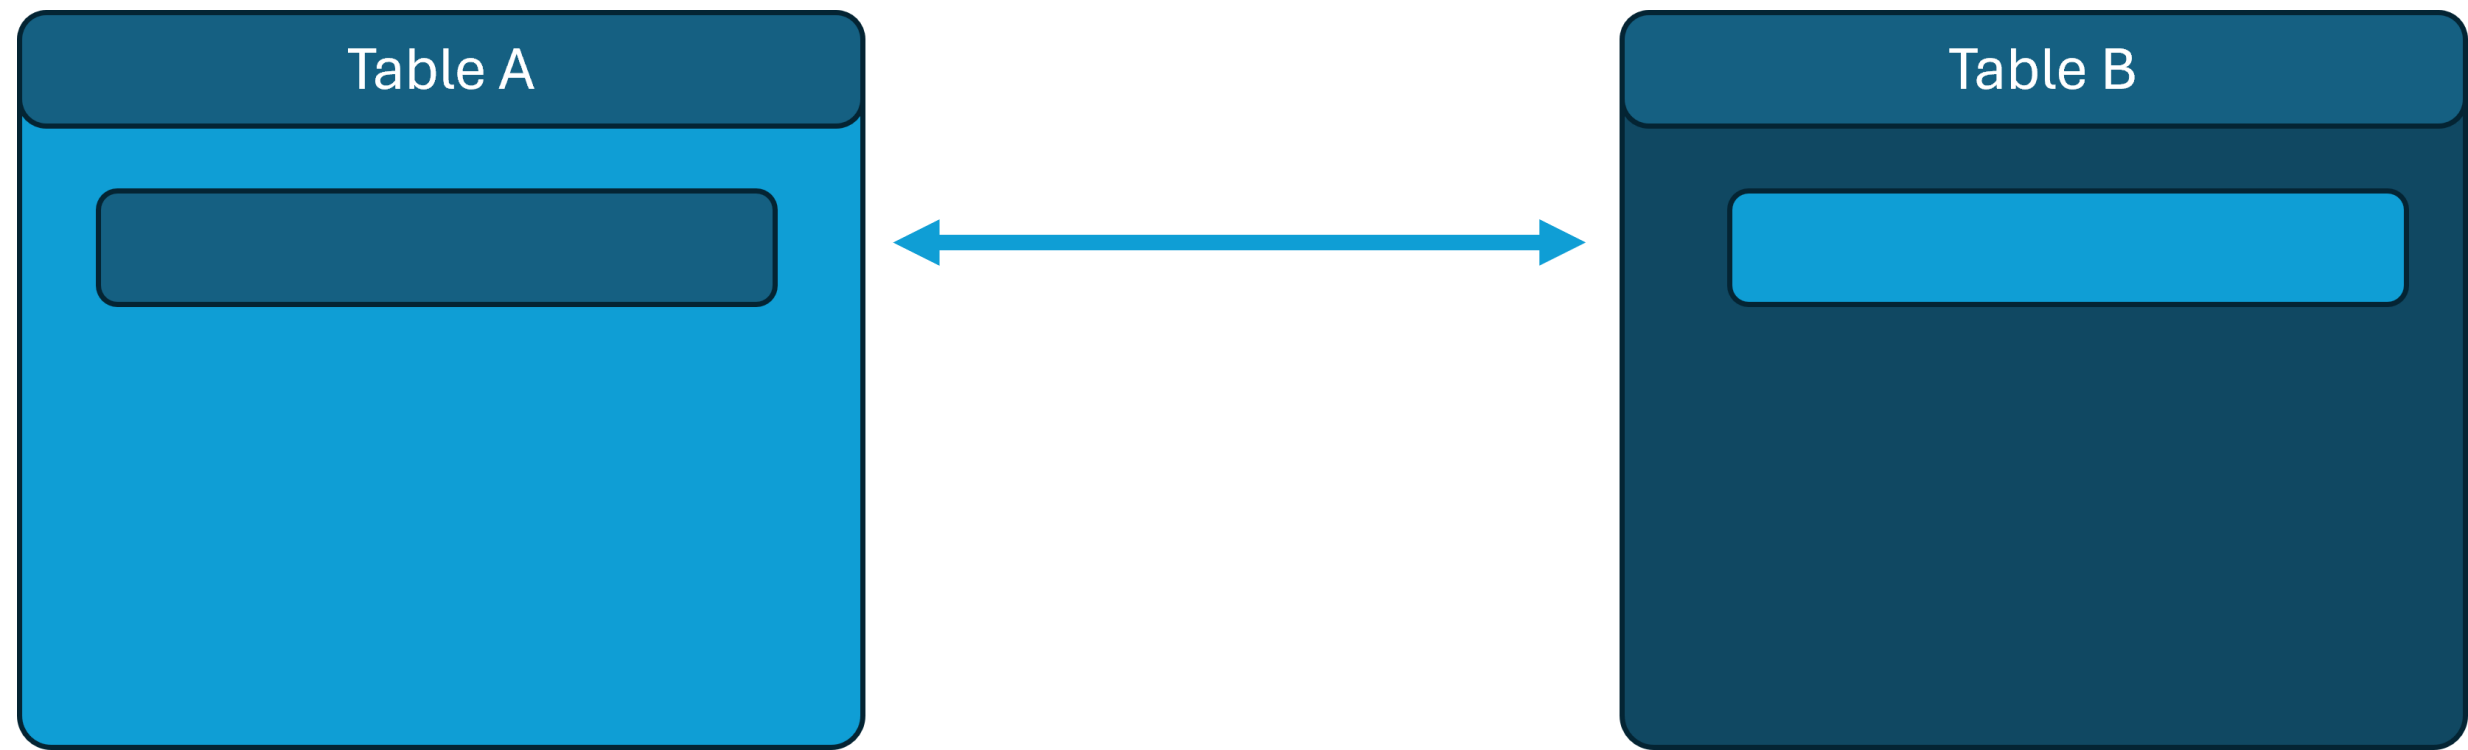

Cardinality

Cardinality - the number of times one row of data from the first table matches with a row of data from a second table.

Cardinality

Cardinality - the number of times one row of data from the first table matches with a row of data from a second table.

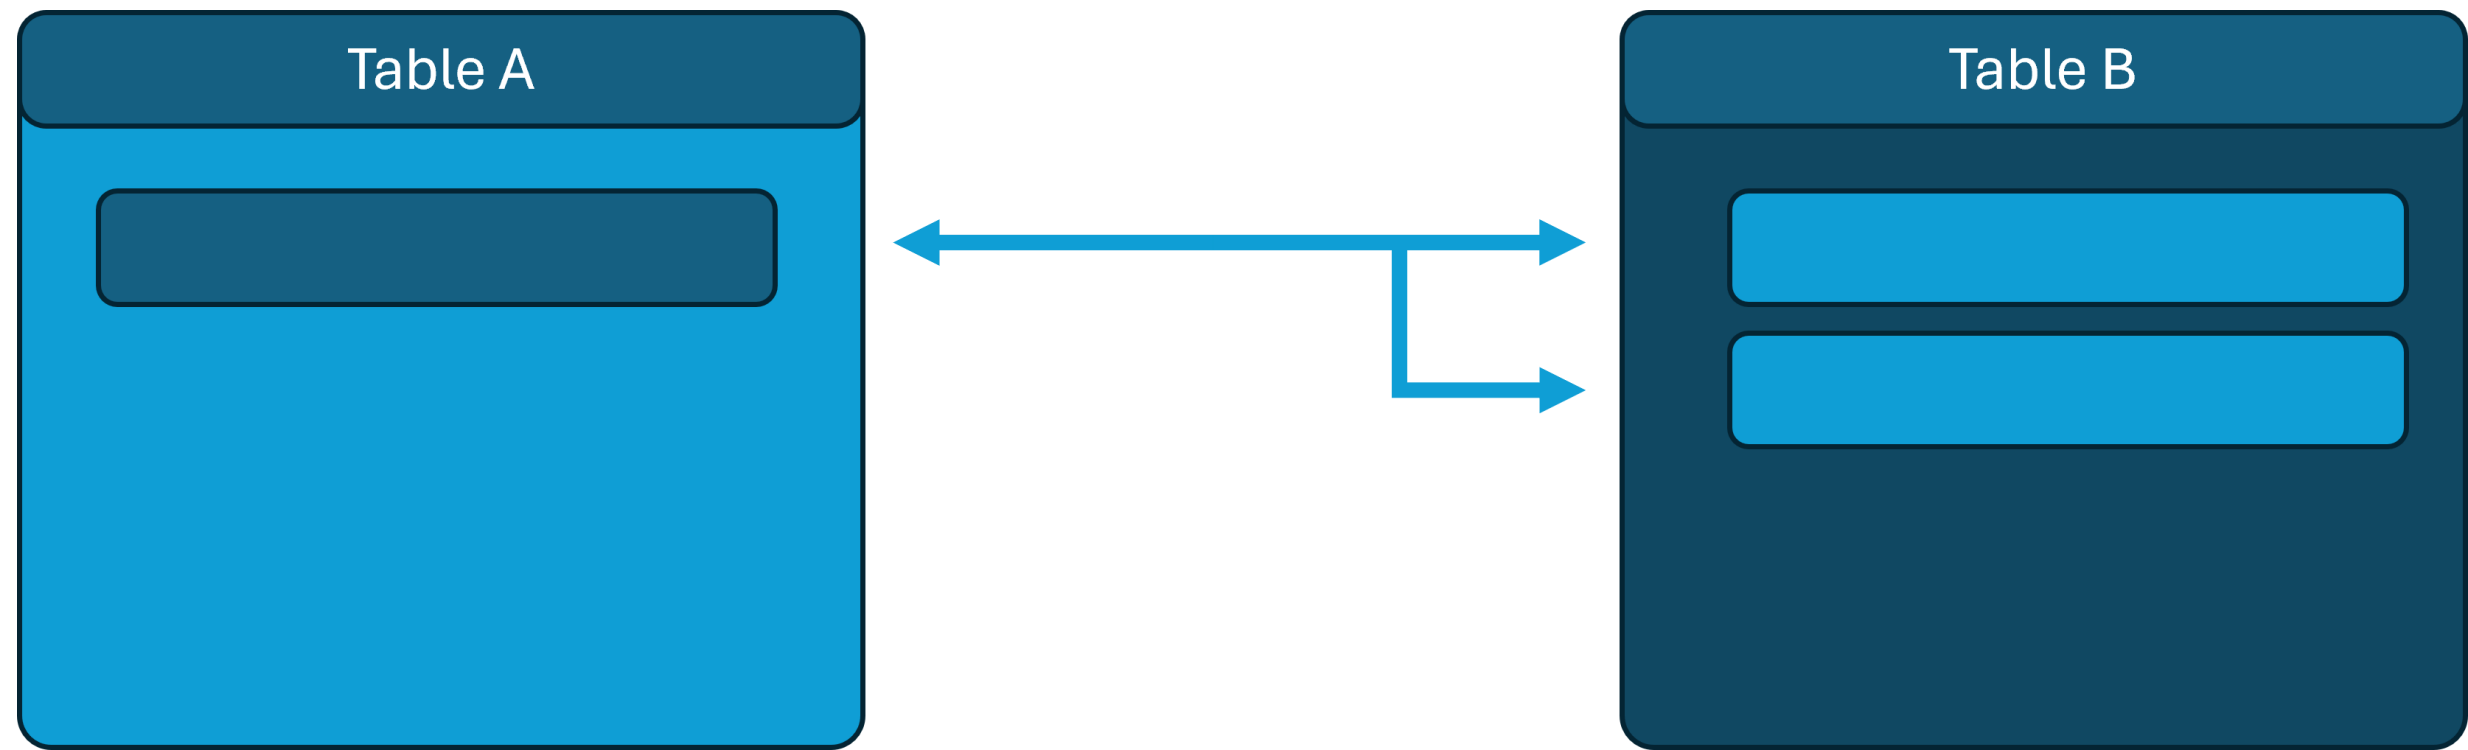

One-to-one

Cardinality

Cardinality - the number of times one row of data from the first table matches with a row of data from a second table.

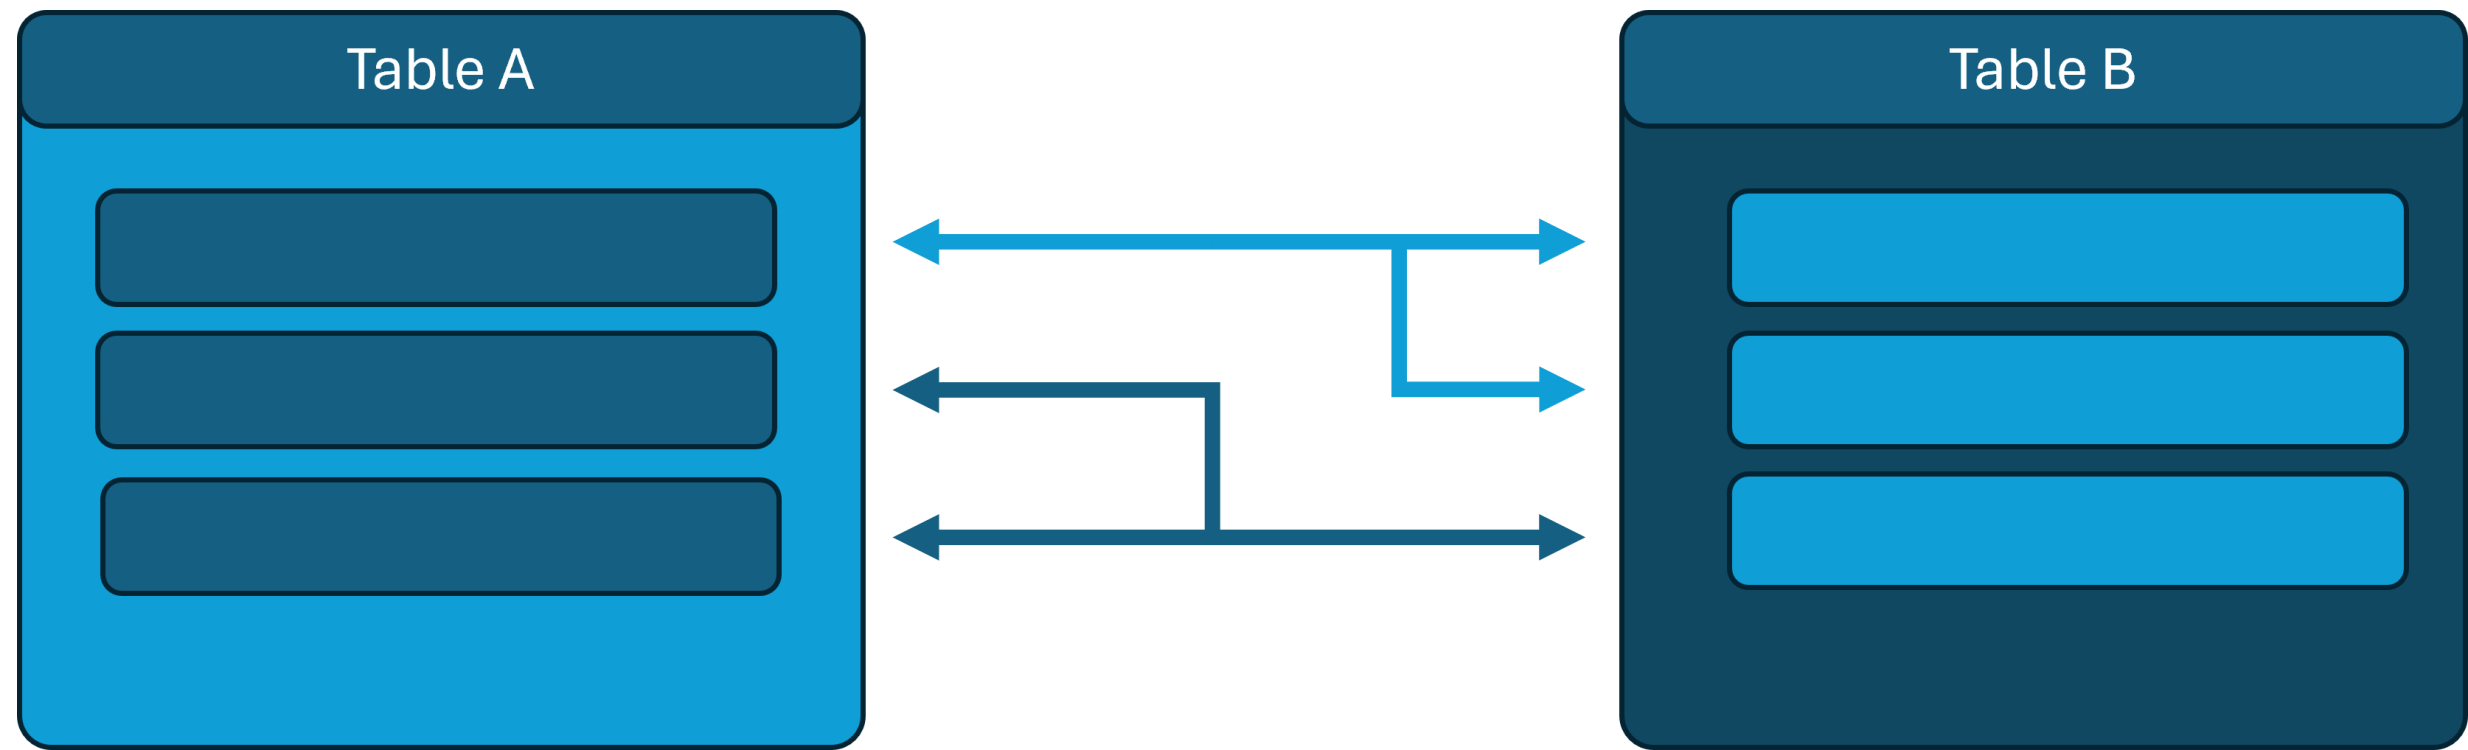

One-to-many

Cardinality

Cardinality - the number of times one row of data from the first table matches with a row of data from a second table.

Many-to-many

Hierarchies

A hierarchy is a way of organizing data into levels of increasing granularity.

Example:

- Level 1: Organization
 - Level 2: Company
 - Level 3: Division
 - Level 4: Department
 - Level 5: Team
 - Level 6: Individual Employee
