

Data stories with dashboards

POWER PIVOT IN EXCEL

Nick Edwards
Analyst at Roofstock

What is a dashboard?

A dashboard is a visual presentation of metrics that provides insights

Data storytelling

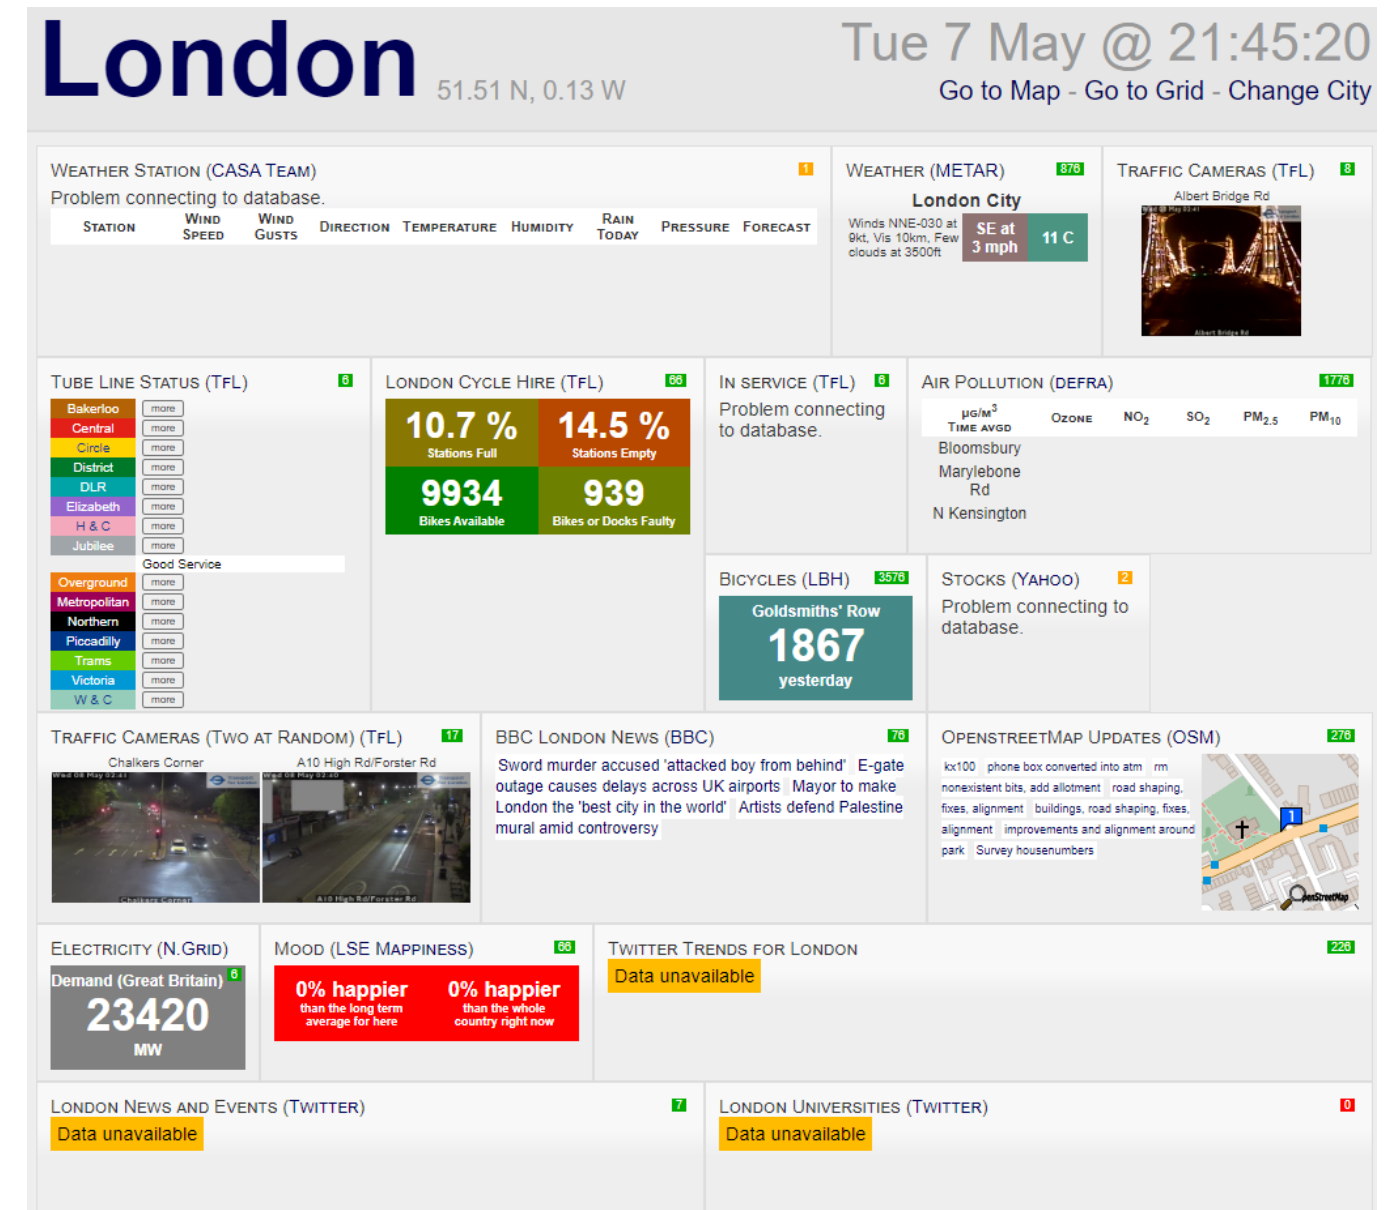

Data storytelling uses data and visualizations to communicate insights.

- Make insights more understandable and engaging
 - Use visualizations
 - Highlight key findings

Best practices

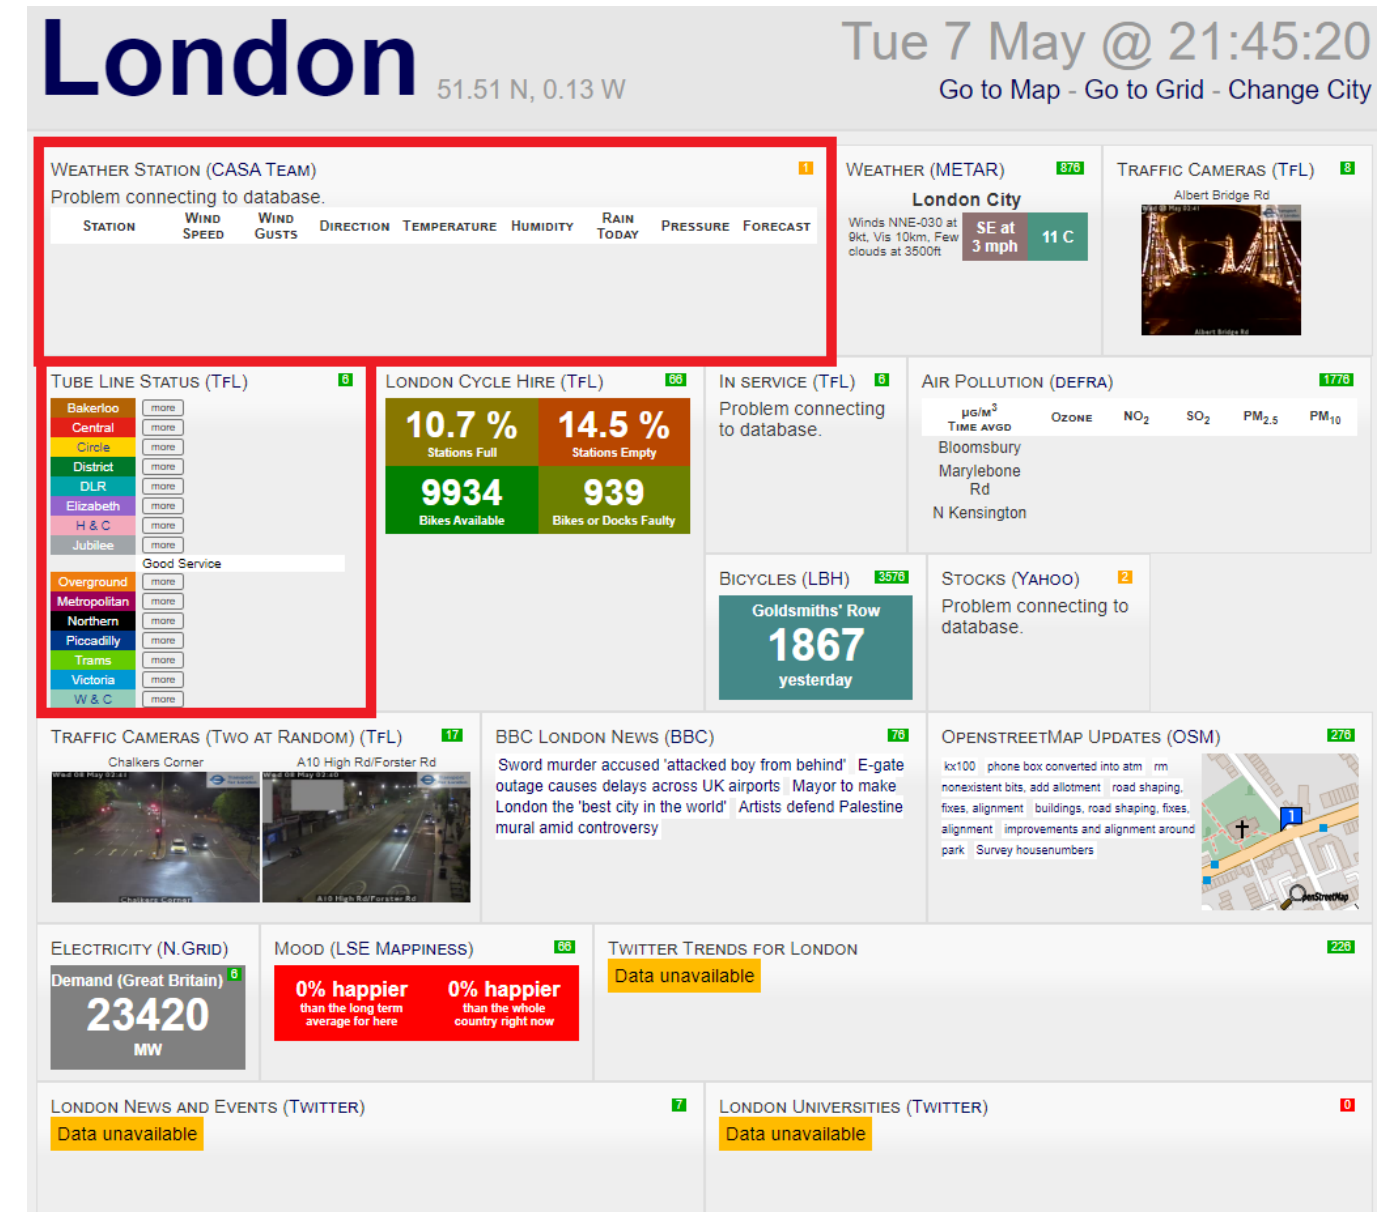

1. Define clear objectives
 - Clearly answers a question
2. Know your audience and scope
 - Different people have different needs

POWER PIVOT IN EXCEL

Congratulations!

POWER PIVOT IN EXCEL

Nick Edwards

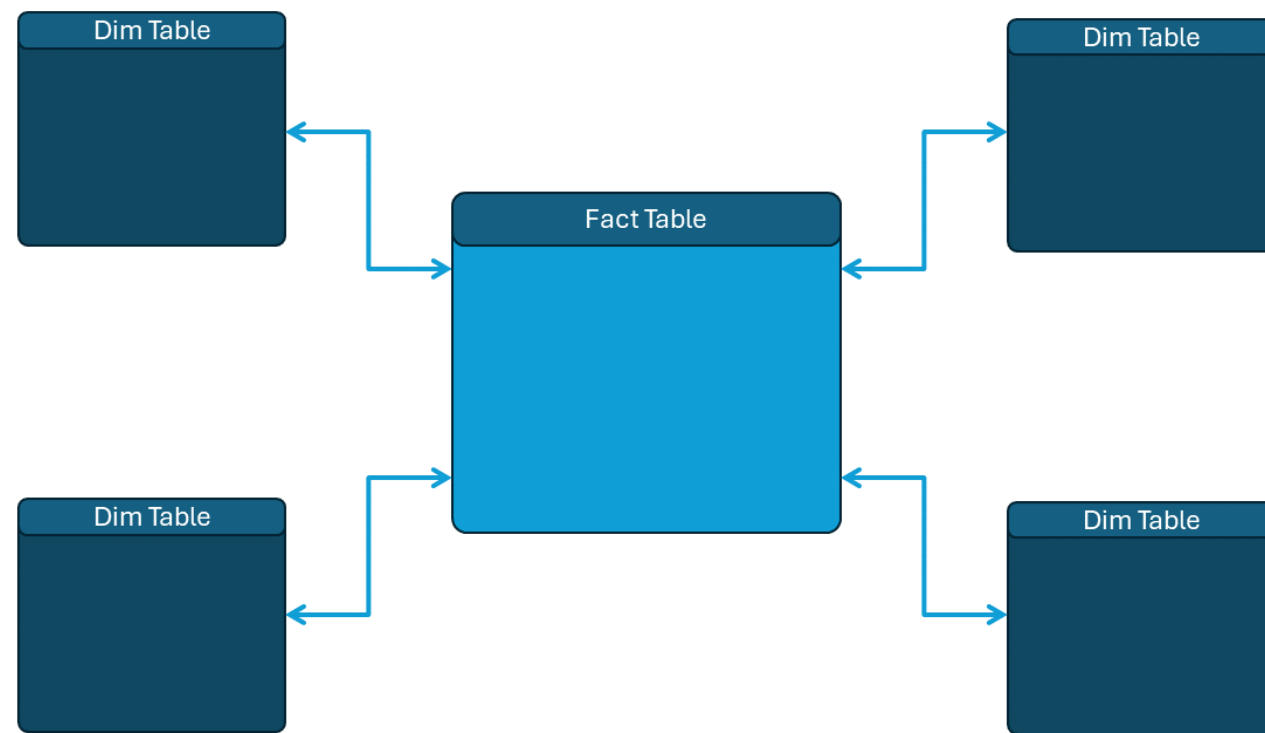

Analyst at Roofstock

Starting in Power Pivot

- Enabled Power Pivot in your Excel add-ons
- Used Power Query to import and clean data
- Prepared data for analysis

Data modeling

- Used data modeling techniques in Power Pivot
- Created star schemas using relationships
- Created hierarchies to structure data

Data Analysis Expressions

- Started with Data Analysis eXpressions (DAX)
- Created calculated columns and measures
- Used functions like `SUM()` and `RELATED()`
- Added measures to PivotTables

Dashboards

- Created dashboards with Power Pivot
- Used a combination of *PivotTables*, *PivotCharts*, slicers, and KPIs
- Told data stories with KPIs and trends
- Made a cohesive dashboard with connected slicers

Congratulations!
